Electronic imaging system using removable software enhanced storage device

- uses software preloaded for operating, optics establishing optical
parameters of image capture and image sensing section electrically
capturing image in optical section

ABSTRACT EP 568468 A2 (Translated)

This installation comprises:

- an acquisition unit (5.40.41) intended to capture the optical image of the subject, a photograph or sequence of photographs of which it is wished to produce, associated with a unit (8) for storing the signals

thus captured.

- a screen (6) connected to the acquisition unit (5,40,41) and intended to allow simultaneous viewing by the said subject of the image or of the images perceived by the acquisition unit.

- a device (10,11) for effecting actual production of the photograph or sequence of photographs by injunction of the said subject.

A semi-transparent mirror (4) pointing along the bisector of the angle defined by the respective optical axes of the acquisition unit and of the screen is mounted on the optical axis of the acquisition unit in such a way as to generate a virtual image of the said screen in the optical path of the camera.

The installation is fitted with an interaction unit (17) intended to be actuated by the subject, so as to freeze the image viewed on the screen at the moment of actuation thereof, and to bring about production thereof.

TRANSLATED ABSTRACT WORD COUNT: 193

ABSTRACT EP 568468 A2

Cette installation comprend :

- un organe d'acquisition (5,40,41), destine a capter l'image optique du sujet dont on desire realiser une photographie ou une sequence de photographies, associee a un organe de stockage (8) des signaux ainsi captees.

- un ecran (6), connecte a l'organe d'acquisition (5,40,41) et destine a permettre la visualisation simultanee par ledit sujet de l'image ou des images percues par l'organe d'acquisition.

- un dispositif (10,11) pour effectuer la realisation proprement dite de la photographie ou de la sequence de photographies sur injonction dudit sujet.

On monte sur l'axe optique de l'organe d'acquisition, un miroir semi-transparent (4), oriente selon la bissectrice de l'angle defini par les axes optiques respectifs de l'organe d'acquisition et de l'ecran de telle sorte a generer une image virtuelle dudit ecran sur le trajet optique de la camera.

On munit l'installation d'un organe d'interaction (17) destine a etre actionne par le sujet, afin de figer l'image visualisee sur l'ecran a l'instant de son actionnement, et induire sa realisation. (voir l'image dans le document original)
